# RETRO COLLECTIO Our retro bricks take you effortlessly back in time. These bricks feature the charm and ambiance of yesteryear, but with the quality of today's standards. To achieve this excellent combination of qualities, we first fire bricks of the same high quality as all our products. The bricks are then subjected to an artificial aging process. This involves tumbling them in a barrel – similar to a centrifuge – for hours until they are literally stripped of their sharp edges. Afterwards, the bricks look as if they have been in use for many years. A thin cement coating completes the charming retro look. Retro bricks are also available in brick slips and corners. **Cheyenne HV WF**

# Carbon-sintered facing bricks

A building with a Unique appearance depends entirely on the bricks used. Sintered bricks have a timeless quality and bring a Characteristic look and feel to every projects.

Before the bricks are loaded into the kiln, they are sprinkled with carbon powder.

Being fired at a high temperature causes them to start to melt, giving the **bricks** different colour in some

spots and creatinga unique aesthetic.

#### An enduring ambition

Here at Rijswaard, progress is one of the most important cornerstones of our business. While the focus during our first decade was primarily on improving our products, production processes and working conditions, our main focus today is the environment. It's why we boldly pursue every opportunity to reduce our environmental impact and footprint.

In change in recent years. There is not enough space here to explain how environmentally friendly our production processes are, but one of the latest updates is worth highlighting. The stockyard where our inventory is stored is covered. This means that less plastic is needed to protect the bricks from the elements. But this is not the most impressive attribute.

#### 2% annual energy reduction

Nearly half of the overhang – around 15,000 m2 – is fitted with 10.000 solar panels which, together with 37 convertors, can produce 3.2 MWh. That is more than a quarter of the energy needed to keep the factory running. This enabled us to achieve our goal of 30% energy savings from 2005 to 2020, making Rijswaard currently among the most sustainable brickworks in the Netherlands.

#### Perfection brick by brick!
